# NEW PRODUCT ADDITIONS

## New Low PIM Products from Pasternack

### Low PIM Cable Assemblies

Pasternack Enterprises' new 1/2" coaxial jumpers are used on many RF communications applications that benefit from low PIM. Examples of these applications include tower top jumpers, shelter/cabinet jumpers, antenna feed lines and 2-way land mobile radio installations. The new 1/2" corrugated coax jumpers from Pasternack are perfect for runs when, low PIM, low VSWR, low insertion loss, and/or RF Isolation are critical. Our coaxial jumpers are 100% RF tested for PIM and VSWR, ensuring optimum installed performance.

**See Page 9 for Cable Assembly Products**

### Low PIM Connectors

The new low passive intermodulation (PIM) connectors from Pasternack are designed for ease of installation in the field while providing outstanding electrical and mechanical performance. These connectors are ideal for installations where custom length coaxial cable jumpers are needed to provide low PIM levels and outstanding RF performance. Pasternack's new lines of low PIM connectors are perfect for building custom assemblies using our low PIM coaxial cable jumpers.

**See Page 78 for Connector Products**

### Low PIM Adapters

The new low PIM adapters from Pasternack are perfect for applications requiring high performance at ultra low VSWR. Pasternack's new line of precision low PIM adapters is ideal for portable PIM testing and portable sweep testing. Other low PIM adapter applications include installations in cellular/PCS, RF wireless infrastructure, OEM in-rack RF routing, in-building systems, and land mobile radio. Pasternack's new lines of low PIM adapters mate perfectly to our low PIM coaxial cable jumpers.

**See Page 137 for Adapter Products**

## HIGH FREQUENCY ATTENUATORS

Pasternack has recently added 1 Watt 2.4mm and 2.92mm attenuators with operating frequencies up to 50 GHz. These attenuators have stainless steel bodies with anti-torque flats to assist in the application of proper torque during mating of the connectors. The 40 GHz 2.92mm attenuators are available in 1 db increments from 1 to 10 db as well as 12, 15, 20 and 30 db attenuation values. The 50 GHz, 2.4mm version is available in the following attenuation values: 3, 6, 10, 15, 20 and 30 db.

**See Page 185 for Attenuator Products**

## HIGH FREQUENCY TERMINATIONS

Pasternack's new terminations (RF loads) include 1 Watt 40 and 50 GHz versions. They are available with 2.92mm and 2.4mm connector options with male and female interfaces. We have also added a 2 Watt 40 GHz termination with 2.92mm connectors. The Male versions of these terminations are available with and without retaining chains.

**See Page 195 for Termination Products**

## TEST AND MEASUREMENT PRODUCTS.....6

### CALIBRATION KITS.....6

Pasternack offers Type N, 3.5mm and 3 Port Field Calibration Kits. Type N and 3.5mm standard Calibration Kits are designed for use with a broad range of vector network analyzers (VNAs) that utilize a Short-Open-Load calibration technique.

With Pasternack's Type N kit, you can make error-corrected measurements of devices supplied with Type N connectors from DC to 18 GHz. With our 3.5mm kit, you can make error-corrected measurements of devices supplied with either 3.5mm or SMA connectors from DC to 26.5 GHz. This kit contains both Male (Plug) and Female (Jack) connector interfaces to perform full Two-Port error corrections. The Pasternack 3-Port Field Calibration Tools are designed to make error-corrected measurements of devices supplied with 3.5mm, N-Type, or 7/16 DIN connectors.

The Cable Assembly Locator example above includes Between-Series Cable Assembly part numbers in two configurations:  
**Connector 1 to Connector 2 as well as Connector 2 to Connector 1 will be found in the same location.**

Products can only be found under the first instance of the series combination. As an example, PE39421-12 above will be found in only one location in the Cable Assembly Section.

All Pasternack coaxial cable assembly part number indicate the length of the assembly (in inches) following the hyphen.  
 Example: PE300-24 and PE300-26.5 are 24 inches and 26.5 inches in length respectively

**NOTE:** All cable assemblies have a length tolerance of 1.5% or  $\pm 3/8"$ , whichever is greater.

# INDEX GUIDE TO COAXIAL CABLES

## COAXIAL CABLES.....181

### 75 OHM BROADCAST.....181

Pasternack's selection of 75 Ohm Broadcast coaxial cable includes RG59-P plenum cable, commercial grade RG6-CATV, HD mini 59 cable in multiple colors as well as PTFE jacketed RG187A/U.

### RG MIL-C-17 TYPE CABLE.....182

Pasternack offers 31 different MIL-C-17 compliant coaxial cable types. These cables are available in various diameters, jacket materials, impedances, and velocity factors, providing numerous RF cable options to fit your specific requirements.

### COMMUNICATIONS.....181

Our selection of Low Loss cable is designed with high Velocity Factor (VF) dielectric materials and two outer shields for communications applications requiring Low Loss and High Isolation. These cables are offered in several popular sizes including 0.195", 0.240", 0.400", and 0.600" diameters.

### SEMIRIGID AND FORMABLE.....183

Pasternack's Precision Cables are designed for RF and Microwave applications with frequencies up to 65 GHz. These cables are constructed of copper jacketed and tinned aluminum semirigid designs; and tinned braid conformable cable in both FEP jacketed and unjacketed designs. The semi rigid and conformable cables are available from 0.020 to 0.250 inches in diameter.

### HIGH PERFORMANCE.....181

Pasternack's line of High Performance Flexible Cable have high Velocity Factors of 70 to 85% and incorporate Spiral Wrapped outer conductors for superior shielding under flexure. These cables are used as flexible cable alternatives to semirigid cable and in many cases use the same connectors.

### TWINAX.....183

Pasternack offers two versions of Twinax cable with an impedance of 100 or 78 ohms. Twinax cable has two center conductors surrounded by a dielectric. The dielectric is surrounded by a braided outer conductor covered by a PVC jacket material. This construction creates a shielded, twisted pair with superior performance when compared to unshielded, twisted pair cable.

## Notes

# INDEX GUIDE TO AMPLIFIERS, MIXERS, MULTIPLIERS, DETECTORS, LIMITERS, NOISE SOURCES AND SWITCHES

## AMPLIFIERS, MIXERS AND FREQUENCY MULTIPLIERS.....212

### AMPLIFIERS.....212

Pasternack amplifiers are available in general purpose and low noise amplifier designs. Our general purpose amplifiers offer gains to 21 dB and output power up to 16 dBm at frequencies with broadband designs from 10MHz to 3 GHz. The Pasternack line of low noise amplifier (LNA) designs offer gain performance to 25 dB and noise figure levels as low as 2.5 dB with models operating as low as 50 MHz and as high as 18 GHz.

Broadband Amplifiers.....212 Low Noise Amplifiers.....212

### MIXERS.....212

Double Balanced Mixers are available with SMA female connectors with options that have RF operating frequencies ranging from 2 GHz to 18 GHz.

SMA Connectors.....212

### FREQUENCY MULTIPLIERS.....213

Frequency Doublers are available with SMA female connectors and input frequencies ranging from 1.5 GHz to 13 GHz.

SMA Connectors.....213

## DETECTORS / LIMITERS, NOISE SOURCES.....213

### DETECTORS.....213

Our line of connectorized Detectors include biased and zero bias Schottky Diode Detectors, as well as Log Detectors. Options for .01 to 26.5 GHz. detectors are available.

Biased Detectors.....214 Zero Bias Detectors.....213  
Log Detectors.....214

### LIMITERS.....214

Limiters provide attenuation at increased power levels, usually to protect a system from excessive input power levels. PIN-PIN and PIN-Schottky configurations are available from 0.5 to 18 GHz in octave and multi-octave designs.

PIN-PIN.....214 PIN-Schottky.....215

### NOISE SOURCES.....215

Pasternack octave and multi-octave band noise sources operate from 1 to 18 GHz with two design families offering general purpose and high output models. Our general purpose designs offer noise outputs (ENR) to 15.d dB, while our high output designs are capable of noise outputs (ENR) to 35 dB. In both the general purpose and high output designs, the output is a SMA Male connector and the DC Bias input is a BNC Female connector.

Medium Noise Source.....215 High Noise Source.....216

## SWITCHES.....216

### PIN SWITCHES.....217

Coaxial PIN switches with SMA female connectors are available in SPST, SPDT, SP3T, and SP4T versions operating from 10 MHz to 18 GHz.

### RELAY SWITCHES.....216

Relay switches in SPDT, SP4T, SP6T, SP10T, DPDT, and transfer switch configurations up to 18 GHz. Other switch options include latching, terminated, failsafe and normally open models.

# PASTERNAK ENTERPRISES -- REACH PRODUCT COMPLIANCE PROGRAM

## What is REACH Compliance?

Regulation (EC) No. 1907/2006 of the European Parliament and of the Council of 18 December 2006 is commonly referred to as REACH (Registration, Evaluation, Authorization, and Restriction of Chemicals). The REACH regulation became effective on June 1, 2007 to streamline and improve the former legislative framework for chemicals available in the European Union (EU) and European Economic Area (EEA) countries.

The objective of REACH is to improve protection of human health and the protection of the environment from the exposure to chemicals. REACH compliance is mandatory for products manufactured in, or imported into the European Union (EU).

As outlined by the REACH regulation, any organization manufacturing, importing, using or placing a substance, mixture, article or product on the EU market will be responsible for ensuring that the component substances are in compliance with REACH regulations.

## Determining REACH Compliance of Pasternack Products:

Pasternack Enterprises does not currently either manufacture or import any chemical substances into the EU on their own or in articles (products) in quantities of 1 ton or more per year. In addition, products imported by Pasternack Enterprises' customers do not contain chemical substances intended to be released during the normal and reasonably foreseeable conditions of the product's use as defined by the REACH regulation and existing guidance.

However, under REACH, there is an obligation to ensure that articles do not contain <0.1% by weight of Substances of Very High Concern (SVHCs). SVHCs are substances that may cause cancer or other serious health or environmental effects and thus face restriction or outright bans, and are listed in a regularly-updated 'Candidate list'. The current Candidate list can be downloaded from the European Chemicals Agency (ECHA) website:

[http://echa.europa.eu/chem\\_data/authorisation\\_process/candidate\\_list\\_table\\_en.asp](http://echa.europa.eu/chem_data/authorisation_process/candidate_list_table_en.asp)

For each part that has been found to comply with the REACH SVHC reporting requirements, we show an indication of compliance adjacent to the part number using this symbol:

All products displaying this symbol on our website are assured to contain no SVHCs as defined by the Candidate List displayed on the Pasternack REACH certificate. When you locate the product you need on our website, please click on the "Product ID or Part Number". You will see the "REACH symbol" for the specific part. Click on this symbol to view the Certificate of REACH Compliance (printable if needed) for the specific product as well as the applicable ECHA SVHC Candidate list Date.

## Pasternack Enterprises - REACH Product Compliance Program:

At Pasternack Enterprises, we recognize our responsibility as a worldwide supplier of RF, Microwave and Fiber Optic Products subject to the REACH regulations. We have completed a comprehensive effort internally and with our supply chain to determine the REACH compliance of our products. You will find our Reach Symbol adjacent to all products on our website that have been determined by Pasternack and our supply chain to contain less than 0.1% by weight of the REACH substances. You will also see the applicable ECHA SVHC Candidate List Date. "Please refer to our website at [www.Pasternack.com](http://www.Pasternack.com).

The Pasternack Enterprises REACH Product Compliance Program is implemented in accordance with Regulation No. 1907/2006 of the European Parliament and the Council of 18 December 2006. Pasternack has implemented a REACH compliance program to address this legislation. Pasternack Enterprises does not currently either manufacture or import any chemical substances into the EU on their own or in articles (products) in quantities of 1 ton or more per year. In addition, products imported by Pasternack Enterprises' customers do not contain chemical substances intended to be released during the normal and reasonably foreseeable conditions of the product's use as defined by the REACH regulation and existing guidance. Thus, Pasternack Enterprises does not currently have a direct REACH obligation to pre-register substances. Pasternack's REACH Product Compliance is determined by a certification from our supply chain. A Pasternack product is deemed to be REACH compliant when it does not contain Substances of Very High Concern (SVHCs) beyond the specified concentration limits of less than 0.1% by weight as outlined in REACH 1907/2006/EU regulation.

# PASTERNAK ENTERPRISES RoHS COMPLIANCE PROGRAM

Lead-free solder is now available for all cable assemblies upon request or online at [www.Pasternack.com](http://www.Pasternack.com).

## What is RoHS Compliance?

The European Union set forth the RoHS (Restriction of Hazardous Substances) Directive to establish environmental guidelines and legislation to reduce the presence of six (6) materials deemed hazardous to the environment. To comply, products entering the EU must not have a homogeneous presence of these materials above the following levels by weight percentage:

- Lead (Pb) < 0.1%
- Mercury (Hg) < 0.1%
- Cadmium (Cd) < 0.01%
- Hexavalent Chromium (CrVI) < 0.1%
- Polybrominated Biphenyls (PBB) < 0.1%
- Polybrominated Diphenyl Esters (PBDE) < 0.1%

At Pasternack, we recognize our responsibility as a supplier of coax connectors, cable assemblies, and components used within electronic-based systems and products that are targeted for RoHS compliance. We are fully committed to offering RoHS compliance on the majority of our products. We have completed a comprehensive evaluation and analysis program both internally and with our suppliers to establish and publish RoHS compliant statements for our products on our website.

## Determining Pasternack RoHS Compliance

To determine if the product in our catalog is RoHS Compliant, please first refer to our website at [www.Pasternack.com](http://www.Pasternack.com). For each part, we show an indicator of compliance using this symbol:

All products displaying this symbol on our website have been certified as RoHS Compliant. Click on this symbol to view the Certificate of RoHS Compliance for this product.

We recognize that you may have specific questions regarding RoHS certification on Pasternack's components and products. We will be happy to process all such requests as quickly as possible. Please direct any such requests to Pasternack Enterprises Technical Support via email at [TechSupport@Pasternack.com](mailto:TechSupport@Pasternack.com) or by calling Toll-Free within North America at 1-866-PASTERNAK (866-727-8376). International customers, please use +1-949-261-1920.

## Methods Determining RoHS Compliance

RoHS Compliance is determined by a combination of supplier certification and engineering design verification. In most cases, Pasternack's products were determined to be RoHS Compliant. In many cases, the Compliance was through a stated Exemption to the RoHS Directive. As a supplier of coaxial connectors, adapters, and RF components, Pasternack uses materials such as Brass and Stainless Steel which contain lead as a percentage of weight above the 0.1% threshold, but are allowed through the Exemptions as of the October 21<sup>st</sup>, 2005 RoHS Directive amendment. Pasternack uses these Exemptions to the RoHS Directive where applicable.

## What are the Exemptions?

*RoHS Directive text as of the Oct 21<sup>st</sup>, 2005 amendment is underlined, and how it applies to Pasternack products is indicated below each Exemption.*

### ANNEX to ROHS DIRECTIVE 2002/95/EC

**"Applications of lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE) which are exempted from the requirements of Article 4(1)":**

5. Lead in glass of cathode ray tubes, electronic components and fluorescent tubes.  
Some Pasternack products use resistive and/or dielectric inks that contain lead in a glass phase and fall under this exemption 5.
6. Lead as an alloying element in steel containing up to 0.35% lead by weight, aluminum containing up to 0.4% lead by weight and as a copper alloy containing up to 4% lead by weight.  
Most Pasternack products use metal alloys that contain lead below the maximum concentration values specified under this exemption 6. Specifically: aluminum alloys, brass, stainless steel, beryllium copper and phosphor bronze.
7. Lead in solders for servers, storage and storage array systems, network infrastructure equipment for switching, signaling, transmission as well as network management for telecommunications.

All Pasternack coaxial cable assemblies are made using solder containing lead (unless lead-free solder is specified), and may be used in network infrastructure equipment and therefore would fall under this exemption 7. This exemption is application specific, however, and we therefore leave it up to our customer to determine whether this exemption applies to their application.

**Pasternack has loaded new part numbers for cable assemblies using lead-free solder on our website, using the format PE3xxxxLF-yy, where "xxxx" identifies the part using the existing corresponding item number, and "yy" identifies the length in inches. For example, PE3067LF-24 is the same as PE3067-24 (BNC Male to BNC Male, RG58C/U), except it uses lead-free solder to be fully ROHS Compliant.**

# GLOSSARY OF RF TERMS

---

**Absorption:** The loss of power resulting from conversion of power into heat.

**Albaloy:** A "tri-metal" plating finish comprised primarily of copper, tin and zinc which provides good electrical performance. It also provides excellent passive intermodulation (PIM) performance comparable to silver.

**Attenuation:** Attenuation, measured in decibels (dB), is the reduction in signal power that occurs when a signal travels over long distances.

**Bandwidth:** The difference between the upper and lower frequencies in a continuous set of frequencies.

**Circulator:** A passive, three-port device used to control the direction of signal flow in an RF circuit.

**Coaxial Cable:** A cable with an inner conductor surrounded by a flexible and tubular insulating layer, then surrounded by a tubular conducting shield.

**Coaxial Connector:** Typically used with coaxial cables, these connectors are designed to maintain shielding and minimize the change in transmission line impedance at the connection. A RF connector is an electrical connector designed to work at radio frequencies.

**Contact:** The part of an interconnect that interfaces between the connector and the lead or coaxial center conductor on the device being connected.

**DC block:** A capacitor that allows you to separate Direct Current (DC) voltages along a transmission line.

**Decibel (dB):** A decibel is a logarithmic unit expressing the ratio of two powers. It is ten times the logarithm to base 10 of the ratio of two powers.

**Dielectric:** In a coaxial cable, the dielectric is the insulation between the inner and outer conductor. Dielectric influences the electrical properties such as impedance and velocity.

**Diode:** An electronic device with low resistance that allows current to flow in only one direction.

**DWV:** Acronym for Dielectric Withstanding Voltage. DWV is the minimum voltage requirement of a connector's insulating material to ensure high voltage surges will not cause dielectric failure.

**Ferrule (Coaxial):** A short tube used to make solderless connections to a coaxial cable (as in crimping)

**Ferrule (FO):** A component of a fiber optic connection that aligns and holds a fiber in place.

**Fiber Optics:** The transmission of radiant energy (or light) through an optical wave guide, generally made of glass or plastic.

**Flange:** A projection with holes extending a connector or waveguide that permits mounting the connector or waveguide to a panel, or to another mating half.

**Frequency:** Is a signal of AC alternating current (AC) that swings from a high peak to a negative point. Each swing from crest to trough of the wave is called a cycle. Frequency is the number of cycles per second that is measured in Hz (Hertz), where 1 Hz = 1 CPS (Cycles per second)

**Gain:** The ratio of power output to the power input of the amplifier in dB.

**GHz:** Frequency measurement that equals a billion cycles per second. For example, 7 GHz = 7 billion cycles per second.

**Impedance:** A measurement of resistance calibrated in "Ohms" which varies with frequency.

**Insertion Loss:** In a transmission system, it is the change in load power due to the insertion of a particular device.

**Jacket:** On a coaxial cable, it is a non-metallic, outer protective cover applied over an insulated wire or cable.

**Land Mobile Radio:** Also referred to as LMR, is a wireless communications system intended for terrestrial use, typically by users in vehicles or on foot.

**MHz:** Frequency measurement that equals a million cycles per second. For example, 3 MHz = 3 million cycles per second.

**Microwave:** A wavelength on the electromagnetic spectrum lying between the infrared and the radio frequency range. Microwaves extend from 1 GHz to 300 GHz.

# GLOSSARY OF RF TERMS

---

**MIL:** Abbreviation for "Military" (as in Military Standards.)

**Mixer:** Provides frequency translation from the input signal to the output signal. It is a nonlinear electrical circuit that creates new frequencies from two signals applied to it.

**Noise:** Random electrical signals, generated by circuit components or by environmental disturbances.

**Passive Intermodulation (PIM):** Simply put, Passive Intermodulation (PIM) is interference of a signal. PIM is a nonlinear response that occurs when two or more signals are present in a passive device such as a cable, connector, coupler. PIM is typically caused by dissimilar metals or dirty/loose interconnects.

**Phase Shift:** The change in time experience by voltage or current after passing through a circuit or cable. Phase shift is a delay in time that is commonly expressed in degrees or picoseconds when it relates to connectors or cable assemblies.

**Polarization:** Describes how a material responds to an applied electric field as well as the way the material changes the electric field.

**Propagation:** Moving or Transmitting energy along a path.

**Pulse:** A rapid change in signal level over a relatively short period of time.

**Receiver:** A device that detects a signal and converts it into an electrical form that is usable by other electronic devices.

**Return Loss:** Expressed in dB, it is a measure of the amount of reflected power on a transmission line when it is terminated or connected to any passive or active device.

**RF Leakage:** The amount of signal frequency which radiates (leaks) from the RF connector or cable.

**RG/U:** Symbol for cables that are made to Government Specification. The "R" stands for Radio Frequency, the "G" means Government, the corresponding number specifies the government approval, and the "U" means it is a universal specification.

**Rubber Duck Antenna:** An electrically short, omnidirectional antenna used on wireless devices such as GPS receivers. These antennas typically have a flexible plastic shield.

**Semi-Rigid:** A cable with rigid outer conductor that contains a flexible inner conductor and dielectric that form a coaxial transmission line.

**Shielding:** The metal sleeve surrounding the conductors in a wire circuit or cable to prevent interference or leakage.

**Surface Mount Device:** Abbreviated as SMD, it is an active or passive device designed to be soldered to the surface of a printed circuit board.

**Temperature:** Refers to the minimum and maximum temperatures that a given component can operate at while still meeting all specifications unless otherwise noted.

**Termination:** Also known as a Load, terminations are used at the end of a transmission line and are designed to absorb RF power with very little reflection, effectively terminating the line.

**Torque:** Recommended mating torque for industry standard connectors: SMA = 7 to 10 in-lbs; Type-N = 12 to 15 in-lbs; TNC = 12 to 15 in-lbs; 7/16 DIN = 220 to 300 in-lbs.

**Twinax Cable:** Similar to coax cable, but has two inner conductors instead of one. Typically used for very-short-range applications.

**Twinax Connector:** Two-Pole symmetrical connectors that maintain a balanced transmission line. Twinax connectors are ideal for applications using shielded twin-wire cables with different impedances in the range of 75 to 95 Ohms.

**VSWR:** Abbreviation for Voltage Standing Wave Ratio. VSWR is an efficiency measurement of how radio frequency is transmitted from a power source through a transmission line, into a termination (or load).

**Waveguide:** Used at microwave frequencies, waveguides are metallic transmission lines typically used to interconnect transmitters and receivers with antennas.

**Yagi:** A directional, shortwave radio antenna consisting of a horizontal conductor with several insulated dipoles parallel to and in the plane of the conductor.
